PARADIGM technology™

Snowflake Data Cloud Optimization

THE POWER OF PARADIGM

Paradigm Technology helps leverage your organization's scalability and resources to augment and enhance your Snowflake account capabilities. Our team of data cloud experts enables you to:

- Create a framework for business-driven outcomes and cost
- Understand Snowflake consumption based on usage and credits
- Add appropriate security contexts understood by all key constituents
- Classify and tag data for improved management and governance

CONSUMPTION AUDIT

Snowflake resource consumption is a constant variable that grows with your business needs. Understanding how to make the most of Snowflake's workloads is critical to the success of your data cloud program. We partner with your team to:

- Create business-driven outcomes and cost models using object tagging and real-time dashboards
- Build workloads around consumption, including assigning stakeholders and educating on platform ROI
- Establish a framework to leverage moving forward (Paradigm accelerator)

SECURITY AUDIT

Security is safer on the cloud, and Snowflake proves it. Our expert approach assesses your organization's current situation and creates a plan that fits your IT, Security, and Audit concerns. We focus on:

- Scoring your current security model and identifying steps to build your framework
- Classifying PII, PCI DSS, FedRAMP, ATO, ITAR, SOC 2 Type 2 and HITRUST to address your security framework
- Recommending standard encryption, entitlement, and security features for alerts and integrations
- Identifying a data classification framework leveraging out-of-the-box features from Snowflake
- Automating SOX and internal controls monitoring

OPERATIONAL IMPACT[1]

612% 3-year return on investment

50% Faster time to roll out

75% Reduced IT support time
